

REMARKS

Applicants request reconsideration of the present application in light of the preceding amendments and the following remarks. Support for new claim 18 is found in the originally examined claims 9-11 and 13, and as noted by the examiner in Office Action dated April 6, 2006, at page 50, line 8 to page 51, line 5. Applicants have amended the claims to reflect subject matter indicated as allowable by the examiner in the Office Action dated April 6, 2006. Applicants request rejoinder of the process claim under the *Ochiai* guidelines.

Applicants respond to the points raised in the Advisory Action dated July 20, 2006 as follows.

Support for new claims 19-22

The compounds of claim 19 are supported by Table 10 at pages 115-116. Claims 20 and 22, drawn to a method of making, are supported by original claim 12 (last claim of page 257). Claims 21 and 23, drawn to a pharmaceutical composition, are supported by original claim 13 (first claim of page 258).

Objection to the Specification

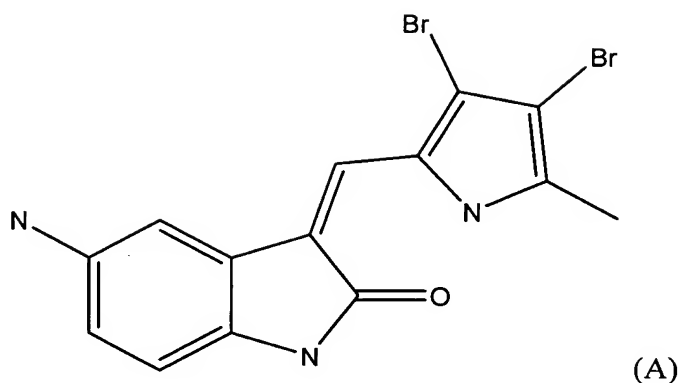

In the response filed on July 6, 2006, as well as the current response, applicants have amended the specification as follows:

Please amend the heading at page 61, line 25 as follows.
Brief Description of the ~~Drawings~~ and Tables
Please cancel the text of page 61, lines 26-17.

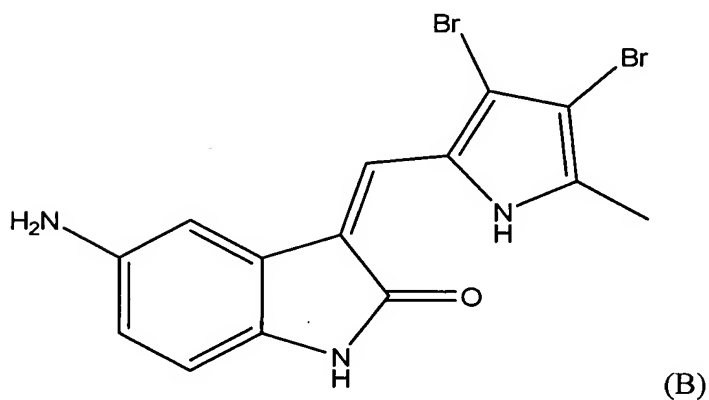

Therefore, applicants have and did respond to the objection of the specification.

Valence of First Compound of Claim 19

Applicants have inserted symbols to denote that hydrogen is attached to the amino groups. Specifically, the first compound of claim 19 as previously presented appears below as Formula (A).

The revised depiction of the same compound now appears in claim 19 as Formula (B).

Applicants urge that Formula (A) would be readily understood by one of skill in the art as a short-hand version of Formula (B). Moreover, applicants note that the examiner herself used Formula (A) in the Office Actions dated October 12, 2005 and April 6, 2006.

Period Missing

Claim 19 now has a period at the end of the claim.

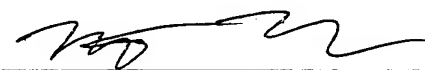

Applicants respectfully submit that the issues raised in the outstanding Advisory Action relate to formality matters rather than the merits of the claims, which are directed to subject matter considered allowable in the Office Action dated April 6, 2006.

This short-hand chemical formula of the omitted hydrogens would have been readily understood by one of ordinary skill in the art.

The examiner is invited to contact the undersigned by telephone if it is felt that a telephone interview would advance the prosecution of the present application.

Respectfully submitted,

Date September 6, 2006
